1. RECOMMENDATION FOR STOOL SAMPLE

The stool sample should be collected, if possible, during diarrhea.

Free fiber diet is recommended the day before the sample collecting.

- Collect the stool in the sterile container provided by the laboratory.
- Label the container with your name, date and time of stool collecting.

2. TRANSPORTATION

- Store the container in a fridge in a sealed plastic bag if you can't hand it in straight away
- The container should be kept in a fridge (+2-+8°C) until it is time to deliver to the lab.
- A stool sample must be delivered to the lab within the day of collection.
